VINCENT ANDREI P. SANCHEZ

biceentandreei@gmail.com | +63 939 492 3791 | Santo Tomas City, Batangas | github.com/PATOTSTI

PROFESSIONAL SUMMARY

Computer Engineering graduate and IT intern with hands-on experience in Python automation, database migration, and report-generation workflows. Built full-stack monitoring tools and computer vision systems using React, FastAPI, and PyTorch. Comfortable writing technical documentation, troubleshooting issues independently, and working on remote technical projects.

WORK EXPERIENCE

ASIA UNITED BANK CORPORATION
IT Intern

- Migrated legacy Visual Basic 6 (VB6) banking applications to Python, preserving core business logic and functionality
- Built automated report-generation tools to process banking transaction logs and export data to Microsoft Excel, reducing manual reporting work
- Implemented database improvements such as data migration, metadata management, and transaction traceability features
- Authored technical documentation, user guides, and troubleshooting references while coordinating with supervisors on requirements and revisions

EDUCATION

BATANGAS STATE UNIVERSITY - ALANGILAN **2022 -2026**
Bachelor of Science in Computer Engineering

FIRST ASIA INSTITUTE OF TECHNOLOGY AND HUMANITIES **2020 -2022**
STEM Strand (Senior High School)

SKILLS

AI / Machine Learning, AI Automation, Computer Vision, API Integration, Python Automation, JavaScript, C++, Dart, React, FastAPI, Technical Documentation, Troubleshooting

TOOLS

OpenAI, ChatGPT, Anthropic Claude, PyTorch, YOLOv8, Ultralytics, OpenCV, Git, GitHub, Visual Studio Code, ESP32, Arduino, Microsoft Excel

PROJECTS

github.com/PATOTSTI/oilwater-thesis **JAN 2026 - MAY 2026**
Hydrobot & Aquadetect - Thesis Project

- Designed and built an autonomous RC boat with ESP32, GPS, and IMU for real-time oil-spill detection and water filtration
- Trained a YOLOv8 computer vision model through six iterations to detect oil spills from aerial imagery, reaching 73.48% mAP50
- Built a full-stack monitoring dashboard using React, FastAPI, and Leaflet to visualize boat telemetry and detection results in real time
- Engineered a natural-fiber filtration system and optimized material ratios for oil absorption efficiency
